## Create a database for the schema:

All keys (termKey, dayKey, studentKey, sectionKey) are surrogate keys. For each dimension these values start at 1.

Create section data sufficient for the sections you have registered for at UWinnipeg for the Fall 2017 and Winter 2018 terms.

You must include yourself and, using generatedata.com, create data for 100 other students.

Your date dimension must have 1 row for each of the days from July 1, 2017 to June 30, 2018.

You must submit (to your instructor) via email either

- An MS Access database, or
- The SQL to create and load a PostgreSQL database. You want to ensure this SQL works ... so you should run your SQL script(s).

An example using generatedata.com appears on next page:
